Craiova, Romania

Romanian

22.05.1998

Education

- **Master's degree in Software Engineering**
  Faculty of Automatics, Electronics and Computers
  2021 - 2023
  Craiova, Romania
- **Bachelor's degree in Automatics and Applied Informatics**
  Faculty of Automatics, Electronics and Computers
  2017 - 2021
  Craiova, Romania

Languages

Romanian - Native Speaker

English - Fluent

Summary

Innovative Software Engineer with almost 5 years of experience in JavaScript development. Possess a strong background in analyzing, designing, and implementing business applications using the Node.js in the Back-End and various Front-End technologies like Angular or React. Possess excellent problem-solving skills, a dedication to quality and a drive for continuous improvement.

Work Experience

Software Engineer, Nagarro
May 2021 - Present

Recent Projects

1. E-Commerce Cloud Platform (Microservices Architecture)
Designed and developed a cloud-based platform for managing e-commerce operations and aggregating data across multiple marketplaces and ERP-integrated shops. The system was built using a microservices architecture with event-driven communication, REST APIs, and background processing for high scalability and performance.

Tech Stack:
JavaScript, TypeScript, Node.js, NestJS, React, PostgreSQL, RabbitMQ, Redis, Docker, Kubernetes, Grafana, Jest, AWS Lambda, SQS, GitLab

Responsibilities:

- Designed and developed multiple microservices using Node.js and NestJS
- Collaborated closely with client stakeholders to refine requirements and contribute to sprint planning and backlog prioritization
- Improved system performance by refactoring long-running processes into asynchronous workflows
- Integrated third-party APIs and ensured reliable, scalable communication between services
- Created and maintained technical documentation for APIs, services, and development processes
- Proactively identified improvement opportunities and proposed solutions to enhance performance, usability, and overall code quality in order to improve the product

2. Government Data Management Platform (Frontend)
Contributed to the development of a data-intensive Angular application used for managing and visualizing business data provided by the Swiss government. Focused on building a scalable, maintainable frontend architecture and delivering a performant, user-friendly experience for complex datasets.
Tech Stack:
Angular, TypeScript, GraphQL
Responsibilities:

- Developed modular, reusable Angular components following best practices for scalability and maintainability
- Integrated GraphQL APIs, optimizing data fetching and reducing unnecessary network overhead
- Collaborated with backend and product teams to clarify requirements and ensure seamless data integration
- Improved application performance and responsiveness through optimized rendering
- Ensured code quality through consistent structure, reviews, and adherence to team standards

Skills

Programming languages: Javascript, Typescript.
Web technologies: Node.js, Express, Angular, React, HTML5, CSS3
APIs and middleware: REST, GraphQL, JSON, RabbitMQ
Database: PostgreSQL, MongoDB, Redis
Tools and platforms: Git, Jenkins, Docker, Kubernetes, Grafana
